

KBS Protects TransGrid's Dapto Substations

KBS Passive Fire Pty. Ltd. has completed supplying FM and UL Rated KBS Coating and Mortar Seal to the TransGrid's Dapto Substation located in South Sydney, New South Wales.

The contract for the installation of KBS Coating and KBS Mortar was completed by Transpacific Industrial Solutions.

KBS Coating and Mortar Seal were installed to FM Global standards (FM 3971 & FM4990). All applications of KBS Materials were inspected on practical completion by KBS Passive Fire to double check the correct application and procedures had taken place.

The KBS Penetration Seals installed at the Substations are rated for a minimum of 120 minutes.

TransGrid is a (Statutory) State Owned Corporation responsible for the management and development of the New South Wales high voltage electricity network transmitting power between generators, bulk distributor corporations, some direct customers and other states to ensure reliability and security of supply to all business and domestic consumers in New South Wales.

KBS Coating was installed to stop flame spread along the cable system and KBS Mortar to stop fire, smoke and gases entering or exiting the building.

Over a period of 9 years KBS products have been installed into approx. 25 TransGrid Substations including Dapto.

We would like to thank TransGrid for their continued support and look forward to helping them with their passive fire requirements in the future.
