

KBS Coating Protecting Cables in Mexico!

KBS Passive Fire Pty. Ltd. in conjunction with Tecnoabahez-Lee has completed supplying FM Rated Coating to Petrochemical Mexico (PEMEX) in Cancun, Mexico.

The contract for the installation of KBS Coating was completed by Jisor Construcciones y Servicios S.A. DE .C.V. Carlos from Tecnoabahez-Lee can be contacted on +52 01 921 214 9683

The KBS Coating was installed to FM Global standard FM 3971.

A pre-inspection of the works in PEMEX was completed by KBS Passive Fire's Project Office based in Canada. The installation of KBS Coating was initially overseen by KBS to assess that the installation was in accordance with FM and the manufacturer's specifications.

KBS Coating was installed to stop flame spread along the cable and cable tray. As KBS Coating has now completed a 25 year Weather test, it can be placed internally or externally regardless.

KBS Coating is an ablative, non-intumescent cable coat.

KBS Coating was chosen by PEMEX for use in external areas as well as areas that fuels may be found.

KBS Coating is ideal for external and internal areas that contain fuel oils as it has been tested to over 100 types of oils and chemicals.

KBS Coating can also fire rate existing cables for up to 60 minutes under IEC 60331-11.

KBS Coating was installed in 3 substations in the polyethylene plant North Side #1 and South Side #1 and 3.

We would like to thank Petrochemical Mexico (PEMEX) for their decision to use KBS Coating and we look forward to their continued support in the future.
